SiT

Sustainability in TCLF

Welcome to the SiT newsletter!

We're so excited to share you that our SiT project is involved in ECOSYSTEX.

ECOSYSTEX is the European community of practice for a sustainable textile.

One key aim of ECOSYSTEX is to support EU-level objectives (such as the Pact for Skills, the Union of Skills, and related policy goals) through joint activities, greater visibility, and stronger coordination.

For us this is an exceptional opportunity for international cooperation with a focus on long-term sustainable practices in TCLF – Textiles, clothing, leather and footwear industries.

More information for ECOSYSTEX and their activities can be found on <https://www.ecosystex.eu/>

Project news!

In recent years, it has become clear that the textile sector needs inevitable change, which brings with it many opportunities for development. The two emerging professions, Bio-Textile Technician and Recycling Manager, represent an excellent opportunity for career growth and for building a more sustainable sector.

This is where our project comes in. As you may know, we are in the process of developing training materials, which will be available as modular courses and uploaded to a MOOC platform. All materials will be available in the official languages of all project partners.

By making it simple, this platform will help students, future professionals and current workers enhance their knowledge and skills. Check our communication channels to stay updated on the launch of the course!
