SiT Sustainability in TCLF Project

Partners met in Italy to shape the future of training

In October, the **SiT Sustainability in TCLF** project partners met in **Padova, Italy**, to finalise the structure of the training programme and outline the steps needed to ensure that future students and participants gain maximum benefit from the project.

The partners agreed that the **online learning modules** would be enhanced with **face-to-face meetings, webinars, and study visits**. In **May 2026,** the most engaged learners will come together in **Greece for a bootcamp**, where they can share their ideas, refine their concepts, and draw inspiration from one other.

Two micro-degrees are now available on the project's e-learning platform: the BIO-Textile Technician and Recycling Manager courses are open! Soon, these modules will also be available in all partner languages.

Beyond the training programme, a key aspect of the project is fostering networking and experience-sharing among students, companies, and industry experts.

To support this, a dedicated platform has been created. By creating a profile, you can join both national and international groups, connect with peers, exchange knowledge, and expand your professional network.
